

## **IN THE SPECIFICATION**

Please amend page 1, lines 15-21 as follows:

Current gaming regulations in many parts of the world require players to be paid returns in proportion to their bet level. For example, if a player plays a single line gaming machine at 1 credit, and achieves 3 'X' symbols on a line and a prize of 5 credits is awarded, then it would be expected that a player achieving the same result and playing 2 credits on the same single line game would be awarded 10 credits. This is referred to as linearity and ensures all players are paid prizes that are proportionate to their bet level. This feature may also be described as the probability of winning the jackpot being based upon the scatter symbols being linearly dependant upon the size of the player's wager relative to a maximum possible wager.

## **CLEAN SCANNABLE TEXT TO BE USED TO REPLACE PAGE 1, LINES 15-21:**

Current gaming regulations in many parts of the world require players to be paid returns in proportion to their bet level. For example, if a player plays a single line gaming machine at 1 credit, and achieves 3 'X' symbols on a line and a prize of 5 credits is awarded, then it would be expected that a player achieving the same result and playing 2 credits on the same single line game would be awarded 10 credits. This is referred to as linearity and ensures all players are paid prizes that are proportionate to their bet level. This feature may also be described as the probability of winning the jackpot being based upon the scatter symbols being linearly dependant upon the size of the player's wager relative to a maximum possible wager.
